[1D_PL]Future prospects for nuclear fuel

Discussion version

chair: Ken Kurosaki (Kyoto Univ.)

Wed. Sep 8, 2021 1:00 PM - 2:30 PM Room D

[1D_PL08]Discussion

This session takes up six different types of fuels, which are Light water reactor fuels, MOX fuels, Metal fuels, Nitride fuels, High temperature gas-cooled reactor fuels and Molten salt fuels, as the continuing theme from the previous meeting. The comprehensive discussion will be conducted on the basis of the developmental status focusing on irradiation experiments. This session gives importance to the discussion rather than the presentations.
