Oral Presentation

## [AMD7]Oxide TFT: Fabrication Process

Chair: Toshiaki Arai (JOLED Inc.) Co-Chair: Yujiro Takeda (Sharp)

Fri. Nov 29, 2019 1:20 PM - 2:40 PM Mid-sized Hall B (1F)

1:20 PM - 1:45 PM

## [AMD7-1(Invited)]Nanostructured IGZO thin-film transistors with remarkably enhanced current density and on-off ratio

Kairong Huang<sup>1</sup>, \*Chuan Liu<sup>1</sup> (1. Sun Yat-sen University (China)) Keywords:Thin-film transistor, oxide semiconductor, nanostructures

We develop oxide TFTs with nanoscale and periodic degenerately doped heterostructures by using a strategy based on near-field nanolithography. These nanostructured TFTs remarkably enhanced in current density, compared with homogeneous IGZO TFTs. The on– off ratio was higher than  $10^9$ , with notably scaling effect with channel length.
