### [FLXp1-10L]Semiconducting carbon nanotube-based stretchable transistors

\*Dongseob Ji<sup>1</sup>, Jimin Kwon<sup>1</sup>, Haksoon Jung<sup>1</sup>, Yong-Young Noh<sup>1</sup> (1. Pohang University of Science and Technology (Korea))

Keywords:stretchable transistor, semiconducting carbon nanotube, SEBS, carbon nanotube sorting

Realizing stretchable electronics requires special materials with intrinsically elastic or durable properties. One of candidates is the semiconducting carbon nanotube due to its excellent mechanical property and ultra-high charge transport mobility.

In this work, the stretchable transistor is composed of sorted single-walled carbon nanotube (SWNT) semiconductors and insulating elastomer.
