## [LCTp2]Alignment Technologies

Thu. Nov 28, 2019 10:40 AM - 1:10 PM Main Hall (1F)

---

10:40 AM - 1:10 PM

### [LCTp2-3]The influence of PI and Reactive Mesogens to the formation and stability of pretilt angle

\*Wei Cui<sup>1</sup>, Hongquan Wei<sup>2</sup>, Te-Jen Tseng<sup>2</sup>, Chung-Ching Hsieh<sup>2</sup> (1. Peking University Shenzhen Graduate School/Shenzhen China Star Optoelectronics Technology Co., Ltd (China), 2. Shenzhen China Star Optoelectronics Technology Co., Ltd (China))

Keywords:PSVA LC;, The stability of pretilt angle, Reactive Mesogen, Polyimide

In the large-area fabrication of real panel, black circle and banding mura arised. This phenomenon was improved by adjusting the structure of PI and RM : PI with rigid side chain and RM with soft sturcture could make smaller pretilt angle and better pretilt stability.
