Miss terminology in astro-space science

SATO, Isao^{1*}

¹Nihon University

There are some inadequate spellings of foreign names in Japanese. "hare-susei" and "koriai-no-chikara" are wrong examples in science, and "harii-susei" and "koriorisu-no-chikara" are correct.

The law was changed last year to charge for the wrong expression of names in all kinds of items and services. In order to keep compliance, academic communities should pay attention to terminology.
