

## Study on the Seismograms Recorded at the ASL

\*Takuto Fukunishi<sup>1</sup>, Mayu Tachibana<sup>1</sup>, Karen Mukai<sup>1</sup>

### 1.Tennoji High School attached to Osaka Kyoiku University

By using seismograms of the ASL (Albuque Seismorogical Laboratory),continuous recording for 40 years, we invetigate some characteristics of earthquakes such features as, durations, distinations, and waveforms etc.

Our results are,

- We found a positive correlation between magnitudes and duration times.
- Distribution of hypocenters is irregular.
- The intervals between major earthquakes are not at random but successive.

Dr. konishi( Osaka Kyoiku University) kindly advised at the SSH symposium.

Mr. Okamoto( Osaka Kyoiku University) encouraged and advised.

Thanks.
