
[JJ] Evening Poster | A (Atmospheric and Hydrospheric Sciences) | A-HW Hydrology & Water Environment

[A-HW25]Isotope Hydrology 2018

convener:Masaya Yasuhara(Rissho Univ.)

Wed. May 23, 2018 5:15 PM - 6:30 PM Poster Hall (International Exhibition Hall7, Makuhari Messe)

The purpose of the session is to review the present state of knowledge of isotope hydrology, by bringing together hydrologists, geologists, volcanologists, geochemists, agronomists, ecologists, engineers and so on.

[AHW25-P04]Study of volatile flux from magma of Aso volcano through shallow groundwater layer

Keywords:Aso, volatile flux from magma, river survey

In order to investigate the volatile flux from magma of Aso Volcano through shallow groundwater system, we are conducting river surveys in and around the Aso caldera area. According to the last year's survey, it was deduced that fluxes of S and Cl from magma of Aso Volcano through shallow groundwater system are 66 ton S/day (160kg/day/km²) and 30 ton Cl/day (70kg/day/km²). Calculated S and Cl fluxes are similar scale with those released by volcanic gases from the Aso volcano, 215 ton S/day and 16 ton Cl/day.

In this year, a river survey was conducted around the Aso caldera area (Midori, Kikuchi, Chikugo, Ono and Gokase Rivers). It is resulted that flow rate of S and Cl of those rivers are 3-11kg/day/km² and 4-40kg/day/km².

This study was supported by the Secretariat of the Nuclear Regulation Authority, Japan.
