[M-IS14]Biogeochemistry

convener:Keisuke Koba(Center for Ecological Research, Kyoto University), Hideaki Shibata(Field Science Center for Northern Biosphere, Hokkaido University), Naohiko Ohkouchi(海洋研究開発機構, 共同), Youhei Yamashita(Faculty of Environmental Earth Science, Hokkaido University)

Wed. May 23, 2018 5:15 PM - 6:30 PM Poster Hall (International Exhibition Hall7, Makuhari Messe)

Biogeochemistry is an interdisciplinary study field including ecology, geochemistry, oceanography, limnology, hydrology, soil science and environmental sciences. Respective researches have tended to be conducted separately so far. This session aims to provide a common platform for biogeochemists of different disciplines, which facilitates the interactive discussion and information exchanges for further development of biogeochemical studies.

[MIS14-P12]Physicochemical properties of the peat which determine the distribution of plants in the Ozegahara moor

*Murakami Hiroki¹, Muneoki Yoh¹ (1.Tokyo University of Agriculture and Technology)

Keywords:peatland, vegetation, water quality

The Ozegahara moor is one of the well developed high moor. In the Ozegahara moor, there are various plants.

My study reveal that the distribution of plants is determined by calcium concentration in peat porewater and ash contents in peat.
