Nutrient labeling of the food is necessary that an astronaut of the whole world feels relieved and eats space foods. Depending on an astronaut, they may not eat some food to have an allergy. Depending on an astronaut, there may be the food which is not edible for religion. The nutrient labeling of space foods is required. Furthermore, the allergic labeling of space foods is necessary, too. We should perform consideration about a nutrient, an allergy, the religion as soon as possible in future so that an astronaut of the whole world stays assuming a study or emigration in a space station and a spaceship for a long term.

Keywords: Nutrient labeling, Space food, Disaster food
