There are numerous natural disaster events such as earthquake, Tsunami, flooding and drought in Asia and Pacific Region and we request young generation for help support by herself or himself, partnership with local community under the disaster occurrence. Both geographical and geological education are requested to combined and supported with each other for bringing up young generation to have an appropriate knowledge of the earth science driving for disaster prevention and mitigation. The skill of ascertaining of the earth condition, the field work should be important for education and also to thing local and act global of education shall enlighten the future innovation of local area with vivacity of local community. The geo-park activities are the direction of corroboration between education on site and discussion with local community for future. Geographic and geologic education is important subject for reflect and solution on the regional problem.

Keywords: geography education, disaster mitigation
