

## when venus looks the most beautiful

\*First Family<sup>1</sup>, Aika Ida<sup>1</sup>, Yuki Amada<sup>1</sup>

1. Gunma Prefectural Maebashi Girls' High School

When we studied the planet in the science class at the junior high school, the interest of Venus increased and I wanted to know more. Also, Venus has the meeting of a goddess. Therefore, I was wondering on what conditions Venus can be seen most beautifully. Two questions raised against this subject. The first question is, which is bigger it is near the Earth and waning.

The second question is, in the first place,” when Venus is the brightest, can be said beautiful “the beauty of Venus=the brightness of Venus ÷ the brightness of the theoretical research centered on plotting and actual research . Discuss the beauty of Venus.
