1. Miyagi Prefectural Tagajo Senior High School

We will report about the Urasado Shinkansen conducted by Miyagi Tagajo High School's Disaster Science Department last fiscal year.

Report on the earth science team, among those divided into the geology team, biological team and chemistry group. The geology team initially looked over Nojima Island from Kanazawa Island, the opposite shore of Nonojima, and after discovering the obvious differences in rock formations, it spread out into the non-islands and developed a basic survey for each group. In addition to measurement of strike slope, description of fault and folding structure was made.
