

Road map for future Human geosciences

*Shigeko Haruyama¹

1. Department of Environmental Science, Graduate School of Bioresources, Mie University

Human geosciences is covering with the natural phenomena on the surface of the Earth and human activities and is involving inter-disciplinary field by wide views in different disciplines of natural sciences, human science, social sciences, engineering and governance. Both disaster risk evaluating and strategies for disaster mitigation are important subjects focusing on causes and results of their changes, their future prospects and measures. The relationship between human society and the environment has been progressing in recently. In this period, regarding to Future Earth Program and SDGs, evidence based scenario should be discussed for future road mapping in human geosciences.

Keywords: Human geosciences, Disaster Mitigation
