1. Kochi University, 2. Wakayama University

We performed the practical educations for the disaster prevention childcare at various kindergartens and nurseries in Japan. Based on these activities, we will present the results of the disaster prevention nursing for infants at some kindergartens in the Wakayama city, Japan, and the questionnaire findings for their parents and workers of nursery after the practice. The city is the one of the area where the outbreak of the large-scale disaster caused by the strong ground motion and the tsunami are driven apprehensive in the near future. Therefore, to grasp the situation around of the kindergarten for disaster mitigation is an aim of this study. Based on the practice result of the disaster prevention childcare in such a kindergarten, we are going to improve the disaster mitigation education for infants.
