Geoparks goes beyond just the science framework. I think that how geoparks are expected to show relationship earth and people's livelihood of the future and the past in each area.

In order to attract the public, it will be necessary to establish diverse entrances to diverse people.

In this presentation, from the viewpoint of science design, I would like to have the opportunity to think about the future activities of Geopark together, and introducing the completely new efforts I have been doing to the public in general.

Keywords: science design, diverse perspectives
