

Equality, Diversity and Inclusivity at the European Geosciences Union

*Alberto Montanari¹

1. University of Bologna

We present the strategy of the European Geosciences Union (EGU) to improve equality, diversity and inclusivity in geosciences. In detail, statistics on the EGU awards and medals will be presented with a focus on gender and geographical balance, in the attempt to provide constructive indications to give equal opportunities to researchers across genders, continents and ethnic groups. Furthermore, we will discuss recent actions that EGU undertook to get to target within the context of a positive and inspiring approach, which is particularly oriented to early career scientists and education. The inspiring concept of EGU is that science is a unifying discipline and inclusivity will be vital to ensure that humans and our planet co-evolve sustainably.
