[H-DS11]Geohazards in humid, tectonically active countries and their precursors

Mon. May 23, 2022 5:15 PM - 6:45 PM Exhibition Hall 8

This session covers mass movements of landslide, slope failure, debris flow, and gravitational slope deformation in tectonically active, humid countries, and aims to discuss on their mechanisms, characteristics of occurrence sites, the significance in geological time scale, and the methodology to mitigate their affects by researchers with various related research fields.

5:15 PM - 6:45 PM
