In recent years, the urban redevelopment has been advanced in each city. To update the land-use and the urban functions, high-rise buildings have been accumulated in cities. The city of Osaka has so many high-rise building in the inner city. They have formed the urban mountain ranges. On the other hand, the city of Osaka is surrounded by the ranges of real mountains. Both of them are making the skylines in and around the city. So, the authors are going to analyze the two types of skyline.

Keywords: skyline, landscape analysis, mountain range, building group
