

Symposium

[S37]The 4th current status of reverse translational research conducted by hospital pharmacists ~ Novel pharmacotherapy from a perspective of clinical pharmacist ~

Organizers: Satohiro Masuda (IUHW Narita Hosp Dept Pharmacy), Hiroki Itoh (Oita Univ Hosp, Dept Pharm), Ryuji Ikeda (Univ Miyazaki Hosp Dept Pharmacy), Hirofumi Jono (Kumamoto Univ Hosp, Dept Pharmacy)

Sat. Mar 28, 2020 9:00 AM - 11:00 AM [Room B] Room B-1 (2F)

With innovative advancements in science and technology, large numbers of therapeutic target molecules have recently been identified. Although molecular-targeted agents that modulate the function of target molecules have been widely used in clinical settings, multiple trials and errors are often necessary for proper medication due to a lack of enough clinical evidence. Therefore, clinical pharmacists are required to provide novel clinical evidence in medical settings.

In this symposium, we would like to present the latest topics and their backgrounds concerning the basic and clinical research conducted by clinical pharmacists working in clinical settings, and discuss the current status of research conducted by hospital pharmacists, their issues, and future development, in order to consider the meaning and importance of research activities.

9:00 AM - 9:05 AM

[S37-Opening]オーガナイザー挨拶

増田 智先¹ (1. 国際医療福祉大病院薬)
