### 【松尾 浩一郎先生 略歴】

Koichiro Matsuo

Professor, Oral Health Sciences for Community Welfare, Graduate School of Medical and Dental Sciences, Tokyo Medical and Dental University

Dr. Matsuo earned both DDS and PhD degrees from Tokyo Medical and Dental University. He joined the Department of Physical Medicine and Rehabilitation, Johns Hopkins University as a post-doctoral research fellow for three years (2002-05) and an assistant professor for three years (2005-08). He was back to Japan in 2008, and after working at Matsumoto Dental University (2008-12) and Fujita Health University (2013-21), appointed to current position in 2021.

His clinical interests include geriatric dentistry for frail elderly individuals. His recent research has focused on oral health in frail older individuals and fundamental understanding of physiology of mastication and swallowing.

### 【多田 紗弥夏先生 略歴】

・ Name & Affiliation

Sayaka Tada, DDS, PhD

Assistant Professor

Discipline of Operative Dentistry, Endodontics & Prosthodontics,

Discipline of Primary Dental Care & Population Health

Faculty of Dentistry,

National University of Singapore,

Singapore

・ Short Biography

Dr. Sayaka Tada is Assistant Professor of the Discipline of Operative Dentistry, Endodontics & Prosthodontics as well as the Discipline of Primary Dental Care & Population Health at National University of Singapore since 2018. Currently, she is working as a Principle Investigator of the research project

She received her D.D.S. degree in 2007 and Ph.D. degree in 2012 from Osaka University, Japan. In 2014, she was certificated as prosthodontists from Japanese Society of Prosthodontics. After post-doc training in University College Cork (Ireland) and Osaka University (Japan), she worked as Assistant Professor of the Preventive Dentistry (WHO collaborating center) at Niigata University (Japan) between 2016 and 2017. Currently her major interest is about the management of partially dentate older adults, which ranges from a clinical decision-making process to a public healthcare system.

### 【講演要旨】

世界各国で高齢社会が進み、歯科医学においてもその対応が迫られている。本講演では、British Society of Gerodontology を代表して2名の先生に講演をいただく。イギリスでの高齢社会の現状と歯科医療の状況についておよび、COVID-19の感染拡大がどのように影響を及ぼしたのか講演いただく予定である。

**【このセッションに参加すると】**

- ・英国における高齢社会の状況を知ることができます。
  - ・英国における超高齢社会への歯科における対応を知ることができます。
  - ・英国におけるCOVID-19 感染が老年歯科医学に及ぼした影響と対応について知ることができます。

(2014) [www.sigwales.org](http://www.sigwales.org).

### **Mili Doshi BDS, MSc,**

Consultant in Special Care Dentistry, Surrey and Sussex Health Care Trust

Mili works as a Consultant in Special Care Dentistry at East Surrey Hospital and the Royal Hospital for Neuro-disability and has a special interest in conscious sedation. Mili has always been very committed to improving oral health services for adults with special care needs and integrating oral health into general health. In 2014 Mili developed the Health Education England initiative working to improve oral health for vulnerable adults called ‘*Mouth Care Matters*’ . Mili is a past president of the British Society of Gerodontology and written several publications.

As in other parts of the world, the number of people living longer in the United Kingdom which is a result of many factors that includes improved health care. Within the four nations of the UK, England Scotland, Wales, and Northern Ireland each have slightly different health care services provision that includes dental services and how they are funded. The National Health Service (NHS) is still the main provider of health and dental care. Multi-comorbidity, frailty, and care-dependency varies across the UK and this is mirrored in levels of oral health disease. Similar to other countries world-wide, people are retaining their teeth as they age with more complex dentistry that can rapidly deteriorate should the individual become dependent on care provision. This is a common issue in the UK that the different countries are addressing with various stakeholders and the public.

During the presentation, we will discuss oral health services for older adults in the UK, the work that is being carried out to improve oral health, provide access to appropriate dental services, the integrated working and the use of dental skill mix. The impact both short and long term on oral health due COVID 19 has changed the way we providing dental services in the UK for ever.

Delegates will be made aware of the different types of dental services that are available for older people including general dental services, special care services in hospitals and in the community, and domiciliary care and how they are funded. We will discuss key recommendations from national oral health policies and guidance that had been developed and the role of societies including the British Society of Gerodontology .

A summary of the different oral health improvement and preventative programmes will be shared and how

they are working with health and social care providers to improve the oral health of the most vulnerable in care homes and hospital.

The range of clinical dentistry commonly provided in the UK for frail older people will focus on the range of dental care professionals (skill mix) used to deliver care that includes specialists, dentists, dental hygienists and therapists, clinical dental technicians, dental nurses and oral health improvement practitioners. We will discuss the use of dentally led conscious sedation and general anaesthesia for older people.

Finally, the impact of Covid-19 pandemic and how this will affect oral health care pathways of our older population going forwards.
