

Start-up of earth observation by a small laboratory

小山 幸伸¹、*宮成 祐輔¹

Yukinobu Koyama¹, *YUSUKE MIYANARI¹

1. 大分工業高等専門学校

1. National Institute of Technology, Oita College

In Japan, there is an institution of higher education which is different from university system.

There are National Institute of Technology (NIT) in Japan in total of 51 colleges. The head quarter is located in Tokyo, but the each college is established in most in 47 prefectures in Japan. Because it's scattered about a various part of Japan, those are a strong potential earth observation base.

The NIT, Oita College is located in Oita Prefecture, Kyushu, Japan.

Because the vocational researcher is little again, too, because they're higher educational facilities, but he makes the young generation the subject, there is a problem with the continuity of the study.

However, it's potential because I split regionally.
